“By preventing theft and vandalism, we protect our taproom and our product from damage, ensuring the best possible experience for our customers. “

--Max Filter, Co-Owner and Head Brewer

CHALLENGE

The proprietors of the St. Paul-based microbrewery pride themselves on serving craft beer and providing a gathering space where local residents and craft beer enthusiasts can socialize and celebrate community roots. Once the patrons downed their last call and the facility was closed for the night, the brewhouse owners returned home concerned about leaving their hard work and capital investments unprotected from theft and vandalism. As their success increased, additional risk and worry were also brewing.

SOLUTION

The owners researched commercial security solutions online looking for a locally-owned company to complement their own community-focused mission. Rising to the top of their search was Wellington Security Systems, the local and family-owned security company with over 30 years experience. The experts at Wellington performed a free, no-obligation audit, including a facility and property walk-through consultation to discuss security hardware and service options in real time. Ultimately, the owners chose a perimeter and internal motion sensor system that's perfect for both their business security needs and their budget.

RESULTS

Safeguarding their small business after hours has allowed the owners of Dual Citizen Brewing to focus on their passion for crafting beer and creating a fun community experience. They lock up and go home knowing their livelihood is protected, and they arrive at work in the morning confident the building is secure. Here's to craft brew, community, and peace of mind.
